Updates To EER from Phase 1 :

1. Changed Sale from a weak entity to ternary Sale relation between "Sale", "Vehicle" and "Customer" entities.
2. Updated Customer to be a union of Person and Business from a disjoint superclass.
3. Updated part number to be a partial key for Part entity.
4. Changed "Employee User" and its subclasses from having a disjoint/mandatory constraint to an overlapping/mandatory one.
5. For better representation, changed the name of "User" entity to "EmployeeUser" entity and "Individual Person" to "Person".
